

All children want to know where they come from. But how do we put it into words for a child to understand?

With its bright pictures, cheerful story, and medically accurate information, "Before Cherry Street" lets you explore with a child the wonder and science of what goes on inside a baby bump.

### Month Two

- The baby's brain activity can be recorded.
- The heartbeat can be heard and is twice as fast as his mother's.
- All essential organs are forming.
- Fingers, toes and elbows are visible.

### Month Four

- The baby can suck his thumb and swallow.
- Taste buds are present.
- The mother can feel the baby kick.
- The skin is almost transparent.

Picked up by CMDA

Great for ages 4-10  
And families  
expecting another  
baby

Erin Brownback is an advocate for the goodness of God's design for the family as the ideal foundation for society. She is a strategy and communications consultant for corporate, non-profit and university clients, and speaks and writes for various organizations. She loves being Auntie Erin to twelve wonderful children, and looks forward to the family of her own that God has for her.
